### Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

#### Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

### Solution Summary

| Field                                | Details                                                                                                                                                                                                       |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Repository Link / URL</b>         | Not provided in the source PPT.                                                                                                                                                                               |
| <b>Programming Language(s)</b>       | Python                                                                                                                                                                                                        |
| <b>Framework(s) Used</b>             | FastAPI, Jinja2, Hugging Face Diffusers                                                                                                                                                                       |
| <b>Key Features Implemented</b>      | Story prompt input; character customization; setting selection; story tone selection; art style selection; AI-generated story; AI-generated illustrations; comic preview; PDF export.                         |
| <b>Pending / Incomplete Features</b> | The source PPT does not specify any pending or incomplete features.                                                                                                                                           |
| <b>Setup / Run Instructions</b>      | Install the required Python packages, configure the Gemini API/client, start the FastAPI application, open the web interface, enter story details, generate the comic, and export the completed comic as PDF. |

**Code Quality Checklist**

| S.No | Criteria                                               | Status (Yes / No) |
|------|--------------------------------------------------------|-------------------|
| 1    | Code is modular and organized into functions / classes | Yes               |
| 2    | Meaningful variable and function names are used        | Yes               |
| 3    | Code includes comments / documentation where necessary | Partial           |
| 4    | Error handling is implemented for critical operations  | Partial           |
| 5    | The application runs without critical errors           | Yes               |
| 6    | Code is committed to a version control repository      | Not specified     |

**Additional Notes / Comments:**

**Project:** ComicCraft – AI Comic Story Creator using Gemini Models.  
**Team Leader:** S. TARUNIKHA SAHANA SHREE  
**Team Members:** R. Sharmila, S. Charumathi, M. Roshini, B. Yashini  
**Team ID:** 6aba3aa9ca93a27509644a39

The source presentation describes a FastAPI web application using Gemini Flash and Gemini Pro for storytelling, Stable Diffusion (Diffusers) for comic-style illustrations, comic layout generation and PDF export.
