Project Name	Comic craft AI
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes(if require)
10	Demo video or walkthrough (if required)	Yes

ComicCraft-AI/

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

[Paste or describe your folder structure here. Example:]

```

/project-root
/src    - Source code files
/tests  - Test files
/docs   - Documentation
/config - Configuration files
README.md - Setup and run instructions
requirements.txt - Python dependencies (or package.json for Node)
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA
Login Credentials (Demo)	NA
Platform / Hosting Provider	Local Host/Local development environment
Repository Link	https://github.com/kumarvinoth94332-jpg/comic-craft.git
Demo Video Link	https://drive.google.com/file/d/15w1vrkyVxnIfI9HHjQffgm7hLgSotExF/view?usp=drive_link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install Python on the system.
2. Open the Comic Craft AI project folder in Visual Studio Code.
3. Open the terminal in VS Code.
4. Create a virtual environment:

```
python -m venv .venv
```

5. Activate the virtual environment on Windows:

```
.venv\Scripts\activate
```

6. Install the required dependencies:

```
pip install -r requirements.txt
```

7. Create the environment configuration file:

```
.env
```

8. Add the required API key and configuration values to the .env file.
9. Start the Comic Craft AI application using:

```
python main.py
```

10. Open the local URL displayed in the terminal in a web browser.
11. Enter the required comic information in the Comic Craft AI interface.
12. Submit the input to generate the comic story.
13. Verify that the generated story and main-character information are displayed correctly.
14. To stop the application, press Ctrl + C in the terminal.

Pre-requisites:

[List required software, versions, and system requirements]

Step 1: [e.g., Clone the repository: git clone <url>]

Step 2: [e.g., Install dependencies: pip install -r requirements.txt] Step

3: [e.g., Configure environment: copy .env.example to .env] Step 4:

[e.g., Run database migrations: python manage.py migrate] Step 5:

[e.g., Start the application: python manage.py runserver] Step 6:

[e.g., Open browser at http://localhost:8000]

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI-generated story response may take additional time depending on API/server response.	Wait for the API response and avoid repeatedly submitting the same request.
2	The application requires a valid AI API key for AI-based story generation.	Configure the API key correctly in the .env file.
3	The application may not work when there is no internet connection or when the AI API is unavailable.	Check the internet connection and verify that the configured AI service is available.
